A new chapter discusses four frameworks by which theories can be organized; students can see how theories contribute to and are impacted by larger issues about the nature of inquiry. To provide comprehensive, up-to-date coverage of theories, the authors surveyed articles in communication journals published over the last five years. Each chapter covers an average of 13 theories, half of which are new to this edition. New areas covered include health, social media, and “beyond human communication”—communication between humans and nature, humans and objects, humans and technology, humans and the divine. “From the Source” boxes give students a look at the theorists behind the theories—their inspirations, motivations, and goals. Written in an accessible style, the book is ideal for upper-division undergraduate classes and as a comprehensive summary of major theories for the graduate level.

It covers the methods of data collection and analysis and looks at the efficiency of these. It secondarily considers a model for conceptualising such interactions, drawing together several social science components, especially linguistics, based on the idea that there is an organisational structure at work just as with grammar for language. Overall the book proposes a general conceptual framework for guiding empirical investigation, with emphasis on simultaneous study of a number of acts viewed within each other's contexts.
