Oracle Databases on RAC Deployment Guide: VMware, Inc.

To support a virtual IP address, both nodes require an unused IP address that is compatible with the public network's subnet and subnet mask. For communications between instances running on the four nodes, a private network is required. This private network connects only the nodes in the cluster and cannot be accessed from outside the cluster.

An Introduction to Polkadot

support specific features and use cases, and as chain specialization increases, the need to transact between them will only increase over time. Polkadot is a sharded blockchain, meaning it connects several chains together in a single network, allowing them to process transactions in parallel and exchange data between chains with security ...
